Weekly Coal Production

Energy Information Administration
Washington, D C

Production for Week Ended:
September 6, 1986

Highlights

U.S. coal production in the week ended September 6, 1986, as estimated by the Energy Information Administration, totaled 14.90 million short tons (bituminous coal and lignite, 14.84 million short tons; Pennsylvania anthracite, .07 million short tons). This was 13.0 percent lower than in the previous week due to the Labor Day holiday, and was 6.9 percent lower than production in the corresponding week of 1985.

Cumulative U.S. coal production from January 1 through September 6, 1986, was estimated at 603.40 million short tons, 0.7 percent below the 607.53 million short tons produced in the comparable period in 1985.

The methodology used to make weekly estimates of coal production was published in the Weekly Coal Production (DOE/EIA-0218(86/35)), released for publication on September 8, 1986.
